

Pujol's solution for
industry 4.0

Pujol ovens are ready for Industry 4.0 and includes the technology  **Pujol e-Connect** as standard.

Greater control, greater comfort and greater peace of mind.

Remote process control

With  **Pujol e-Connect**, you can access in real-time to the status of the oven. Also, it's possible to program parameters and, for greater peace of mind, you will receive a notification of any incident that occurs in the glass lamination process. It includes the "Cycle-Save" function, that allows the oven to be turned on and stopped due to light cut, all through a secure access control with a password.

Remote technical assistance

Thanks to the remote connection to the oven from any external device with internet access (mobile, tablet or computer), unnecessary trips for technicians to check the status of the machine are avoided. In addition, you can download the files generated on the device with which you connect to your oven.

Data analysis

 **Pujol e-Connect** offers all information to be able to carry out a complete analysis of what is happening with your oven, for example, it is possible to analyze the temperature curves, view the list of alarms or trend graphs.

Process traceability

It is possible through access code by level or user, to obtain clear and quick information on the production process, such as knowing the thickness of the glass or the manufacturing number of the EVA roll.

Pujol e-Connect is included as standard on Lam-Pro Duo, Lam-Pro Top, HST-L, HLH & Pujol 100 series.

Hornos Industriales Pujol is a company belonging to  **Pujol**
