

N-Fluent

EVA to achieve perfect finishes and save edge cleaning costs.

N-Fluent

Five good reasons to choose Evalam N-Fluent

Less cleaning of edges

Evalam N-Fluent has been designed with the goal to help all professionals of glass lamination. Thanks to its unique and innovative formula, it has a plus of strength; translating to a lower product fluidity. This means that there is a lower risk of the EVA flowing through the edges of the glass. The time to clean the glass is clearly reduced, obtaining greater benefits for the business.

UV filtering

Evalam N-Fluent provides UV filtering at any wavelength that is harmful to health (<390 nm). This allows to protect the people and goods that are behind the laminated composition.

85% crosslink

This ensures that laminated glass will have a durability and stability better than any other thermoplastic.

Stability to the contraction

Our exhaustive quality controls demonstrate its stability against contractions once the glass is laminated, protecting it against possible long-term problems such as delamination.

European quality at the best price

Designed and manufactured entirely in Europe, N-Fluent offers an attractive price for great competitiveness to professionals against other products of inferior quality and similar prices. Quality doesn't have to be against the price.

Furthermore, there many Evalam advantages

GROUP

Evalam is a brand belonging to Pujol Group.
